

Dear Hiring Manager,

I am thrilled to apply for the Senior Backend Engineer position at Vay, where I can leverage my technical expertise to revolutionize the future of transportation. As a seasoned backend engineer with a passion for innovative technologies, I am excited about the prospect of joining a team that is pushing the boundaries of what's possible in mobility.

With a strong background in designing and developing scalable backend services, APIs, and cloud infrastructure, I am confident that my skills align with the requirements of this role. My experience with Golang and CI/CD pipelines will enable me to make a significant impact from day one. I am also eager to contribute to cross-team platform engineering initiatives and collaborate with frontend, mobile, and embedded teams to craft seamless solutions that enhance the customer experience.

I am particularly drawn to Vay's cutting-edge remote driving technology and the company's commitment to innovation and excellence. I am impressed by the company's achievements, including the launch of the world's first commercial remote driving product and the expansion of its fleet in Las Vegas. I am excited about the opportunity to work with a dynamic team and contribute to the company's mission to deliver a unique and effortless car rental experience.

Thank you for considering my application. I would welcome the opportunity to discuss my qualifications further and explore how I can contribute to Vay's success. Please feel free to contact me at [asimbilal15@gmail.com](mailto:asimbilal15@gmail.com) or connect with me on LinkedIn.

Best regards,

Asim Bilal
